SUMMARY

Data Analyst and Data Scientist with experience building predictive models, interactive dashboards, and ETL pipelines. Proven ability to translate complex datasets into actionable business intelligence using Python, Tableau, and SQL to drive strategic decision-making and operational efficiency.

EDUCATION

Bachelor of Technology in Computer Science (Artificial Intelligence) 2024 – 2028
Newton School of Technology, Rishihood University Delhi NCR

EXPERIENCE

Software Engineer Intern · *Thoughtiv · Hyderabad, Hybrid* Jun 2025 – Oct 2025

- Built a full-stack SEO automation platform with backend APIs, data pipelines, web scraping modules, and a Chrome extension, enabling one-click directory submissions and reducing submission time from 15 minutes to under 3 minutes per task (~80% reduction in manual effort).
- Replaced a brittle keyword-matching system with a SpaCy-based NLP pipeline for entity recognition, improving classification reliability across a 500-document test set on CPU-only infrastructure.
- Owned 2 production deployments with version control and live monitoring, maintaining 99.5%+ uptime with zero critical failures.

Freelance Web Developer · *Independent · Remote* Mar 2025 – May 2025

- Built and deployed full-stack client applications using React and Node.js, delivering production-ready systems with payment and booking API integrations across multiple client engagements.
- Managed the full delivery lifecycle — requirements, development, deployment, debugging, and iterative updates — independently across all projects.

PROJECTS

Telecom Customer Churn Analytics · Strategic Churn & Revenue Risk Analysis GitHub
Python, Tableau, Excel, SQL, Pandas

- Analyzed 7,043 telecom customer records to identify major churn drivers and revenue-risk segments using Python and Tableau.
- Built interactive executive and operational dashboards tracking churn KPIs, contract behavior, payment methods, and customer demographics.
- Identified that month-to-month contracts contributed ~88% of churn and electronic check users accounted for ~57% of total customer exits.
- Developed business retention strategies focused on contract migration, auto-pay incentives, and senior-citizen retention programs to reduce estimated monthly revenue loss.

Healthcare Readmission Analytics Platform · Predictive Resource Optimization GitHub
Python, Tableau, Pandas, ETL Pipelines

- Processed and analyzed 101,766 clinical records using Python-based ETL workflows and statistical analysis techniques.
- Engineered cleaned healthcare datasets through missing-value handling, demographic normalization, and feature standardization for predictive analysis.
- Developed interactive Tableau dashboards for monitoring 30-day readmission rates, patient risk factors, and treatment behavior patterns.
- Delivered data-driven recommendations supporting hospital resource optimization and reduction of avoidable readmissions.

TECHNICAL SKILLS

Languages: Python, SQL
Data Analytics & Viz: Tableau, Power BI, Advanced Excel, Pandas, NumPy, Matplotlib, Seaborn
Machine Learning: Scikit-learn, XGBoost, PyTorch, Statistical Modeling, Predictive Analytics, NLP
Data Engineering: ETL Pipelines, Data Modeling, Web Scraping, REST APIs
Databases: PostgreSQL, MySQL, MongoDB, SQLite
Tools & Platforms: Docker, Git, AWS (EC2, S3), Streamlit, Jupyter Notebooks, GitHub Actions

ACHIEVEMENTS

- Full-Stack Development Bootcamp** — Alfaleus Technology, IIT Hyderabad (Jul 2025). Selected from the top 10% of 1,200+ applicants; completed projects in full-stack automation, Chrome extensions, web scraping, and backend API integrations.
- Reliance Foundation Undergraduate Scholar** — Awarded a merit-based scholarship for undergraduate studies in recognition of academic achievement.
